

Seminar on Applied Perception in Graphics and Visualization

Course Information

Instructor Information

- Instructor: Dr. Reynold Bailey
- Office: 70-3517
- Telephone: (585) 475-6181
- Office Hours: See handout or schedule on my website
- Website: <http://www.cs.rit.edu/~rjb/>
- Course webpage: http://www.cs.rit.edu/~rjb/APGV_2131.htm
- Email: rjb@cs.rit.edu

Syllabus

- Available on course webpage
- Course Prerequisites: One of
 - CSCI 510 (Introduction to Computer Graphics)
 - CSCI 610 (Foundations of Computer Graphics)
 - Permission of Instructor
- Textbook:
 - There is no required textbook for this course.
- Resources:
 - Proceedings of annual symposium on applied perception in graphics and visualization
 - ACM Transactions on applied perception
 - Visual Perception from a Computer Graphics Perspective, CRC Press
 - Mark Fairchild, Color Appearance Models, 2nd Ed., Wiley-IS&T, UK (2005).
 - Vision and Art: The Biology of Seeing, by Margaret Livingstone, NY, Abrams, 2002

Grading

- The final grade will be determined using the following weights:

Programming Assignments	15%
Class presentations	40%
Project	40%
Class Participation	5%

Programming Assignments

- The programming assignments will focus on different aspects of applied perception in graphics and visualization.
- Assignments will typically be due two weeks after they are assigned.
- Assignments will be posted on course webpage.

Research Papers - Class Presentations

- You are expected to read research papers and other publications on topics related to applied perception in graphics and visualization.
- Select different papers for in-depth study.
- Present the papers you have read in class.
- Three presentations each Wednesday (and some Mondays) starting next week.
- One week before class presentations, submit a list of resources (links to papers, books, websites, software etc.) related to chosen topic. These resources will be made available to the rest of the class.
- Everyone is expected to read all papers and come prepared for discussion.

Research Papers - Class Presentations

- Where do I find papers?
 - <http://www.apgv.org/> (look at the archives)
 - <http://tap.acm.org/>
 - Perception related papers from SIGGRAPH
 - <http://visionscience.com/>
 - Look for links to journals and conferences
 - Do a web search for topics that interest you

Project

- Students are expected to work on a semester-long project and develop a supporting technical paper for submission to an international conference or symposium:
 - A list of possible venues will be provided
- Team projects are expected. The complexity of the project should reflect the number of members of the team, and all team members are expected to contribute equally to the final project.
- Each team will be expected to give a mid-semester presentation as well as a final presentation.

Important Notes

- Academic Integrity:
 - <http://www.cs.rit.edu/programs/academicIntegrity>
 - Please read! Ignorance is not an excuse.
 - All work you submit must be your own.
 - Code or ideas obtained from or inspired by other sources must be properly attributed.
- Grading:
 - This is not an introductory course.
 - You will lose points for not following assignment instructions and for submitting code that is sloppy, undocumented or unstructured, etc.

Important Notes

- Course webpage:
 - http://www.cs.rit.edu/~rjb/APGV_2131.htm
